

Consolution

"solutions for a more efficient business"

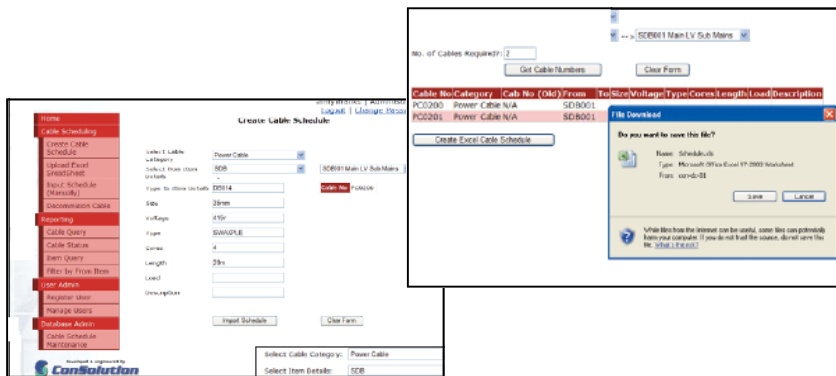

Cable ConSole™

Cable asset Management

With the ever increasing demands to get control of your fixed electrical assets and be compliant with regulations and insurance demands, Consolution can now offer a fully web enabled software tool for managing your electrical installations.

Developed and engineered by Consolution Ltd, our experts are trained in the use and installation of Cable ConSole™.

'Get control of your electrical installation'

The Benefits of Web Enabled software:

There are many features which Cable ConSole™ is able to demonstrate, the ability to automatically assign cable numbers for existing and new installations, using simple drop down menu's increases simplicity and efficiency. This results in the elimination of risk, as cable numbers are assigned technically.

Consolution provides complete traceability, in the form of report installation status (i.e. Assigned, Installed, Disconnected, Removed).

Using a 100% web enabled software results in the ability to:

- Re-import populated Excel cable sheets,
- Generate distribution schedules and update automatically.
- Full report generation of schedules by a single/combination of queries
- Motor listings and management (ConSole Plus).
- Instrument listings and management (ConSole Plus).

How it works:

Cable ConSole™ is a fully functional web based application that our experts customise to a companies own corporate brand and feel. The software is installed centrally on a Windows based application server either locally or at a remote location and is accessed by users through a local intranet or internet web browser. This application is a complete client-server solution without the need for client installations, cutting costs dramatically.

Cable ConSole™ has the ability to interface with other plant database systems and share specific fields for reporting functions.

How we work:

As part of the installation process a Cable ConSole™ engineer will work alongside your engineering team, in order to get your system set up within the shortest time possible. If required further support is available to assist in gathering, sorting and importing existing data from schedules or spreadsheets into the new database (training can be provided on manual data entry).
